

Mia Borgia

Full-Stack Software Engineer

Erie, PA | 814-431-8248 | miamb13@gmail.com | linkedin.com/in/mia-borgia

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 5 years of experience designing and delivering enterprise-grade web applications, spanning cloud-native AWS architecture, C#/.NET, Golang, Python RESTful API design & development, and Angular/React/TypeScript front-ends. Proven technical leader with a track record of taking complex end-to-end features from concept through production - designing thoughtful, accessible, and reusable components, and delivering quality software to meet a range of business needs, from internal tooling to client-facing front-end features. Over 4 years of robust experience in relational database design, with additional experience with Docker and basic CI/CD pipeline deployments. Exceptional cross-functional collaborator known for exemplary written and verbal communication, continuous improvement, keen technical leadership instincts, clear technical design & documentation, thoughtful sprint planning, and a proven track record for mentoring engineering teams through iterative Agile development.

SKILLS

Front-End: Angular, React, TypeScript, HTML5, CSS3, SCSS, responsive design, mobile-first development, Storybook

Testing frameworks: Jest, Jasmine & Karma, Playwright

Cloud & Infrastructure (AWS): Lambda, Cloudwatch, Glue ETL, Step Functions, Amazon Athena, S3, API Gateway, CloudFormation (IaC), Cognito, Verified Permissions

Back-End: C# / .NET, Node.js, Python, Pyspark, Go, FastAPI, REST API Development, GraphQL

Databases: PostgreSQL, MySQL, MariaDB, NoSQL, Neo4j

DevOps, Tools & Practices: Docker, CI/CD pipelines, Git/GitHub, Bitbucket, Elasticsearch, Postman, Visual Studio, Jira, Agile / Scrum, Claude Code

EXPERIENCE

Big Ideas Learning, Inc. (formerly Larson Texts, Inc.) — Erie, PA

Software Engineer | November 2023 - Present

- Serves as technical lead on client-facing feature development end-to-end, crafting technical designs and delivering highly accessible, responsive, cross-compatible, and WCAG-compliant web components
- Designs, builds, maintains, and serves as technical lead of engineering teams developing end-to-end features within enterprise-grade production LMS applications.
- Implements thoughtful solutions in response to internal users' pain points, cross-collaborates empathetically with colleagues in other departments to architect and develop internal tooling to streamline productivity and ensure robust data governance throughout the organization.
- Translates complex product requirements into practical, accessible end-to-end technical designs, and breaks down the effort into Jira tickets across high-visibility timelines of sprint-wise development; regularly and effectively communicates complex architecture & LOE to both technical and non-technical stakeholders and team members.
- Consistently recognized by Product, Design, QA, leadership, and engineering peers for superb collaboration skills, and for thoughtfulness and cohesiveness of technical designs - as well as thorough communication throughout all planning and execution phases of development.
- Regularly collaborates with QA engineers to align automated and manual testing strategies across complex feature releases.
- Troubleshoots bugs and performance bottlenecks across the full stack, collaborates across engineering teams to ensure understanding of application of best practices.

- Mentors more junior members of the team, and is often trusted as an excellent onboarding resource for new team members, encouraging team growth and knowledge-sharing through all levels of seniority.
- Engineered secure handling of PII-linked student records to meet SOC2 and FERPA compliance requirements, including PII scrubbing via AWS DMS, an S3 medallion datalake architecture, and secure + efficient re-association of curated data within a C#/.NET API before surfacing it to an Angular/TypeScript front-end.
- Led multiple teams of engineers in implementing a zero-trust access control layer for a new RBAC-based application using Amazon Verified Permissions, Amazon Cognito, API Gateway, and custom Lambda authorizers.
- Identified and shipped a critical production hotfix within one week of discovery, minimizing client-facing downtime.

Junior Software Engineer | *May 2022 - November 2023*

- Served as technical lead on multiple new features spanning database to front-end on an existing enterprise LMS platform, from technical design through release.
- Built an internal data governance tool for the Content team using TypeScript/Node.js and a relational MySQL schema, replacing a manual, error-prone spreadsheet-editing workflow and significantly increasing the team's content-correction velocity.
- Assisted in a successful, large-scale modernization effort of a production LMS application, on both front-end and back-end; migrated versions from Angular v6 to Angular v16, and .NET v5 to .NET v7.
- Audited and improved a legacy codebase for code quality, integrity, and security; increased front-end unit test coverage on a legacy Angular application by 68%.
- Authored technical documentation and READMEs to support long-term maintainability of legacy systems.

Software Development Intern | *September 2021 - May 2022*

- Developed responsive and dynamic web components in HTML5, SCSS, and Angular Typescript
- Built REST APIs with Express.js and ArangoDB, using Postman for testing and validation.
- Collaborated with engineers to ensure back-end data structures aligned with front-end application logic and business requirements.

EARLY CAREER

Web Development Intern / Creative Director | The DIGIT Program at Penn State Behrend | *2020–2022*

Digital Media & Coding Tutor | Learning Resource Center at Penn State Behrend | *2021–2022*

EDUCATION

Pennsylvania State University, The Behrend College | Erie, PA

B.A., Digital Media, Arts, and Technology | Cum Laude | *August 2018 – May 2022*

PROJECTS

DIGIT Program Website — Independently designed, developed, and deployed (vanilla HTML/CSS/JavaScript) a resource hub for Penn State Behrend's Digital Media, Arts, and Technology program, built in collaboration with the Program Director; served current students, prospective students, and alumni with coursework/credit guidance and a showcase of student work spanning data visualization, 3D modeling, film, and digital humanities projects.

Blues Analysis Project — Led a Python-based NLP research project analyzing linguistic patterns across 1,000+ Blues song lyrics spanning the 1920s–1990s; built a custom web scraper, used regex and XML to structure lyric/metadata, and applied spaCy for text analysis to visualize thematic and linguistic connections across decades of music history.
